## PROJECTS

03/2021  
- 06/2021  
**Website for Public Transport**  
Team Project for the course "Web Technologies" – We created a website (backend & frontend), which provided information to the passengers of public transportation. The website's content is dynamic and all the data are retrieved from a remote database. Technologies applied: HTML, CSS, JS, Node.js, MySQL

10/2020  
- 02/2021  
**Database for a Tennis Club**  
Team Project for the course "Databases" – Main focus of the project was the creation of a SQLite database, which will cover the needs of a tennis club. An desktop application was developed, using Python, so that the user can easily interact with the database.

09/2018  
- 05/2019  
**UPergo**  
Team Project - I was one of the founding members of UPergo, a team which had the goal to create a system that will detect user's body movement and send data, like speed, position etc. to an application. We also participated, as exhibitors, in "Patras IQ 2019".
